Testing Regimes, Accountabilities and Education Policy Bob Lingard

2017-10-02 Around the globe, various kinds of testing, including high stakes national census testing, have become meta-policies, steering

educational systems in particular directions, and having great effects on schools and on teacher practices, as well as upon student learning and curricula. There has also been a complementary global aspect to this with the OECD's PISA and IEA's TIMSS and PIRLS, which have had impacts on national education systems and their policy frameworks. While there has been a globalized educational policy discourse that suggests that high stakes standardised testing will drive up standards and enhance the quality of a nation's human capital and thus their international economic competitiveness, this discourse still manifests itself in specific, vernacular, path dependent ways in different nations. High stakes testing and its effects can also be seen as part of the phenomenon of the 'datafication' of the world and 'policy as numbers', linked to other reforms of the state, including new public management, network governance, and top-down and test-based modes of accountability. This edited collection provides theoretically and empirically informed analyses of these developments. This book was originally published as a special issue of the Journal of Education Policy.

Cognition Thomas A. Farmer 2019-01-14

The study of human cognitive processes provides insight into why we act or react and can help us predict future behaviors. In *Cognition*, authors Thomas Farmer and Margaret Matlin present an engaging and highly relatable examination of how these processes work, and how they are responsible for the way we perceive and interpret the world around us. Broad in scope without sacrificing depth of detail, this text emphasizes the link between conceptual cognitive psychology and real-world experience; case studies, current trends, and historical perspectives merge to provide a comprehensive understanding of core principles and theories. This new Tenth Edition has been updated to reflect the latest research, technology, and thinking, with more in-depth coverage of topics rising to prominence in the field's current knowledge base. Expanded explanations balance classical and contemporary approaches to specific topics, while additional experiments and an emphasis on methodology and experimental design are included to facilitate a greater appreciation of the field's rigorous research.

The End of Public Schools David W. Hursh 2015-10-16 The End of Public Schools analyzes the effect of foundations, corporations, and non-governmental organizations on the rise of neoliberal principles in public education. By first contextualizing the privatization of education within the context of a larger educational crisis, and with particular emphasis on the Gates Foundation and influential state and national politicians, it describes how specific policies that limit public control are advanced across all levels. Informed by a thorough understanding of issues such as standardized testing, teacher tenure,

and charter schools, David Hursh provides a political and pedagogical critique of the current school reform movement, as well details about the increasing resistance efforts on the part of parents, teachers, and the general public.
