Pacific War Remembered John T. Mason Jr. 2013-07-31 In this remarkable

oral history collection, thirty-three participants in the turbulent epic that

began with the day of infamy at Pearl Harbor and ended with the signing

of the surrender documents in Tokyo Harbor tell their stories. Their

remembrances of heartbreak, frustration, heroism, hope, and triumph were

collected over a period of twenty-five years by John T. Mason. Their

recollections reveal perspectives and facts not included in traditional works

of history. Each selection, introduced with a preface that places it in the

context of the Pacific War, takes the reader behind the scenes to present

the personal, untold stories of naval history. Included are Admiral William

S. Sullivan's account of the problems involved in clearing Manila Harbor of

some five hundred wrecked vessels left by the departing Japanese and

Admiral Thomas C. Kinkaid's description of the communications

breakdown at the Battle of Leyte Gulf. There are also the very personal

recollections of humor and horror told by the unknown actors in the war:

the hospital corpsman, the coxswain, and the machinist's mate. Originally

published in 1986, this volume is an unusual and lasting tribute to the

ingenuity and teamwork demonstrated by America's forces in the Pacific as well as a celebration of the human spirit

Agriculture and the Nitrogen Cycle Arvin Mosier 2013-04-10 Nitrogen is an essential element for plant growth and development and a key agricultural input-but in excess it can lead to a host of problems for human and ecological health. Across the globe, distribution of fertilizer nitrogen is very uneven, with some areas subject to nitrogen pollution and others suffering from reduced soil fertility, diminished crop production, and other consequences of inadequate supply. *Agriculture and the Nitrogen Cycle* provides a global assessment of the role of nitrogen fertilizer in the nitrogen cycle. The focus of the book is regional, emphasizing the need to maintain food and fiber production while minimizing environmental impacts where fertilizer is abundant, and the need to enhance fertilizer utilization in systems where nitrogen is limited. The book is derived from a workshop held by the Scientific Committee on Problems of the Environment (SCOPE) in Kampala, Uganda, that brought together the world's leading scientists to examine and discuss the nitrogen cycle and related problems. It contains an overview chapter that summarizes the group's findings, four

chapters on cross-cutting issues, and thirteen background chapters. The book offers a unique synthesis and provides an up-to-date, broad perspective on the issues of nitrogen fertilizer in food production and the interaction of nitrogen and the environment.
