Rhinology and Facial Plastic Surgery Fred J. Stucker 2009-03-28 Georg von Bekesey was awarded the Nobel Prize for his seminal everyone all over the world. In other words it is directed toward work on hearing. It was, however, 43 years later in 2004 that evolving a common scientific language that is spoken uniformly Linda Buck and Richard Axel were awarded the Nobel Prize for and consistently all over the world. Universality, so that norms, their work on olfaction. This is indicative of how the science of staging systems, etc., can be applied anywhere in the world with rhinology is only now coming into its own. For quite some time, equal validity. This can only be achieved through consensus. rhinology was thought to be limited in scope. It is now appreciated that the nose is not only an organ of aesthetic appeal, but rhinologic disease, but also what all surgeons want and that is one that carries out several important, complex functions. Hemostasis in Head and Neck Surgery, An Issue of Otolaryngologic Clinics of North America, E-Book Carl H. Snyderman 2016-07-06 Bleeding is a major factor that hinders visualization in head and neck surgery and is a risk factor for intraoperative complications and perioperative morbidity. Endoscopic approaches also pose significant technical challenges to managing expected intraoperative bleeding and vascular injury. The approach for this publication in *Otolaryngologic Clinics* is to provide clinically relevant information in a problem-based manner that encompasses assessment to identify patients with a high risk for vascular complications, pre-operative, intra-operative and post-operative strategies to manage expected bleeding and major vessel injury during endoscopic sinus and skull base surgery for inflammatory and neoplastic diseases. Clinically relevant anatomy, physiology, pharmacology, and surgical and interventional radiology techniques to manage bleeding are outlined and an algorithm for management of major vessel injury such as internal carotid artery injury is presented. Because skull base surgery is generally undertaken as a team approach, this information is relevant to the subspecialized ENT surgeon from rhinology or head and neck specializations, to neurosurgeons, to interventional radiologists, and to neurophysiologists who monitors intraoperative cerebral and cranial nerve activity for these operations. Carl Snyderman leads this issue with Harshita Pant and has composed topics and assembled an expert group of practitioners to provide

information. The reader will find this a novel, focused, and indispensable resource on all issues of hemostasis in head and neck surgery.
