Learning the Language of Dentistry Peter Crosthwaite 2019-08-20 This book explores the affordances of disciplinary corpora for the teaching and learning of the language of dentistry, within the field of English for Specific Academic Purposes (ESAP). We extract disciplinary register features and vocabulary from three key genres of the dentistry discipline (published experimental research articles, case reports, and novice/professional research reports within the Dental Public Health domain), before integrating these features into ESAP pedagogy in the form of corpus-based ESAP materials that promote student-led direct engagement with disciplinary corpora – an approach known as ‘data-driven learning’. This book is a timely and relevant addition to the field of corpus linguistics and ESAP, and is especially targeted at ESAP professionals who are required to teach disciplinary discourses but who may struggle to know what to teach as non-experts of the target discipline.

Restorative Dentistry Peter Jacobsen 2009-03-16 Restorative Dentistry: An Integrated Approach presents the core of knowledge that forms the basis of clinical practice in restorative dentistry. The book contains a practical common-sense approach to clinical problems structured within the limitations imposed by the patient and the ability and facilities of the dentist. Subjects included in the book are Periodontology, Endodontics, Dental Biomaterials, Oral Biology and Pathology, and Fixed and Removable Prosthodontics. However Restorative Dentistry offers a somewhat unique approach in that it integrates the basic sciences that are fundamental to clinical practice rather than having separate sections or expecting readers to consult other texts for basic information. The integration means that there are not separate sections on the specialist subjects but aspects of these topics are distributed throughout. This second edition is full colour throughout. It has been fully revised with two brand new chapters on Implantology bringing the book up to date with emerging technologies and developments in clinical procedures and materials.
