Approaching Death Committee on Care at the End of Life
1997-10-30 When the end of life makes its inevitable appearance, people should be able to expect reliable, humane, and effective caregiving. Yet too many dying people suffer unnecessarily. While an "overtreated" dying is feared, untreated pain or emotional abandonment are equally frightening. *Approaching Death* reflects a wide-ranging effort to understand what we know about care at the end of life, what we have yet to learn, and what we know but do not adequately apply. It seeks to build understanding of what constitutes good care for the dying and offers recommendations to decisionmakers that address specific barriers to achieving good care. This volume offers a profile of when, where, and how Americans die. It examines the dimensions of caring at the end of life: Determining diagnosis and prognosis and communicating these to patient and family. Establishing clinical and personal goals. Matching physical, psychological, spiritual, and practical

care strategies to the patient's values and circumstances. *Approaching Death* considers the dying experience in hospitals, nursing homes, and other settings and the role of interdisciplinary teams and managed care. It offers perspectives on quality measurement and improvement, the role of practice guidelines, cost concerns, and legal issues such as assisted suicide. The book proposes how health professionals can become better prepared to care well for those who are dying and to understand that these are not patients for whom "nothing can be done."

Oncology Nursing in the Ambulatory Setting Patricia Corcoran Buchsel 2005 This book provides the very latest in position statements, and new, forward-thinking in administrative strategies. Health Care Transition Albert C. Hergenroeder 2018-05-03

This comprehensive book thoroughly addresses all aspects of health care transition of adolescents and young adults with chronic illness or disability; and includes the framework, tools and case-based examples needed to develop and evaluate a Health Care Transition (HCT) planning program that can be implemented regardless of a patient's disease or disability. Health Care Transition: Building a Program for Adolescents and Young Adults with Chronic Illness and Disability is a uniquely inclusive resource, incorporating youth/young adult, caregiver, and pediatric and adult provider voices and perspectives. Part I of the book opens by defining Health Care Transition, describing the urgent need for comprehensive transition planning, barriers to HCT and then offering a framework for developing and evaluating health care transition programs. Part II focuses on the anatomic and neuro-chemical changes that occur in the brain during adolescence and young adulthood, and how they affect function and behavior. Part III covers the perspectives of important participants in the HCT transition process - youth and young adults, caregivers, and both pediatric and adult providers. Each chapter in Part IV addresses a unique aspect of developing HCT programs. Part V explores various examples of successful transition from the perspective of five key participants in the transition process - patients, caregivers, pediatric providers, adult providers and third party payers. Related financial matters are covered in part VI, while Part VII explores special issues such as HCT and the medical home, international perspectives, and potential legal issues. Models of HCT programs are presented in Part VIII, utilizing an example case study. Representing perspectives from over 75 authors and more than 100 medical centers in North America and Europe, Health Care Transition: Building a Program for Adolescents and Young Adults with Chronic Illness and Disability is an ideal resource for any clinician, policy maker, caregiver, or hospitalist working with

youth in transition.

Post-Acute and Long-Term Medicine Pamela A. Fenstemacher 2015-12-12 This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of residents in post-acute and long-term care settings.

Advance Care Planning Laura Charlotte Prater 2018 Advance

Care Planning (ACP) refers to the communication of decisions regarding end-of-life treatment decisions prior to incapacitation. ACP has been associated with better health outcomes at the end of life such as less aggressive care prior to death, improved bereavement outcomes, earlier acceptance of a terminal condition and earlier acceptance of palliative care and hospice. The completion and documentation of ACP in the Electronic Health Record (EHR) is important so that end-of-life treatment decisions can be honored when patients are unable to speak for themselves. This process is multi-faceted and burdened with inconsistencies. Through three related studies, this dissertation used Donabedian's Structure, Process, and Outcome model as a framework for understanding the problem. Study one focused on the structural component of the EHR as it relates to the functionality and documentation of ACP. Results from a survey of over 400 end-of-life physicians indicated a mutual understanding of the importance of ACP documentation in the EHR coupled with critical challenges. Specific challenges included a lack of time and training. Having a consistent tab or area within the EHR was cited as a specific opportunity for facilitating the completion of ACP in the EHR. Study two analyzed the association between several process-related predictors and the completion of ACP documentation in the EHR. Findings indicated that older adults (over age 70) were less likely to have several process-related components of ACP and more likely to operationalized elements of ACP such as a verified Do Not Resuscitate (DNR) order. These findings indicate that there may be a gap in comprehensive communication with older adults, and they are more likely to have a DNR without documentation of a prior conversation or a scanned document in the medical record. Study three examined the association between outcomes and the documentation of ACP in the EHR. Findings indicate that having a DNR documented in the EHR and having an ACP note in the problem list are associated with reduced odds of an admission in the last 30 days

of life. Having ACP documentation in the EHR was not associated with reduced charges at the end of life. The results of this dissertation may be used to strengthen the case that improvement in the documentation and functionality of ACP in the EHR is required. There are several key practical considerations resulting from these studies that could be applied in the form of local quality improvement initiatives aimed at improving consistency in documentation. Other implications from these studies point toward continuing to support efforts to reimburse physicians for ACP conversations and improving standardized end-of-life communication training requirements for all clinicians.

Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal 2011-07-12 "In the preface to this impressive and well-produced book, the editors state that their aim is not to describe a new surgical specialty, since most surgeons will soon need to be "geriatric surgeons," but to assemble a comprehensive account that will allow "all providers of healthcare to the elderly to understand the issues involved in choosing surgery as a treatment option for their patients." This is a useful book that deserves to do well. I hope that the editors and their publisher will have the stamina to make this the first of several editions, as it is clear that updated information about surgery in the elderly

will be required to keep pace with this important field." NEJM Book Review

Hospice Palliative Home Care and Bereavement Support Lorraine Holtslander 2019-07-17 This book provides an unique resource for registered nurses working in hospice palliative care at home and for the community, outside of acute care settings and also incorporates literature related to palliative care in acute health care settings, as part of the overall services and supports required. Very few resources exist which specifically address hospice palliative care in the home setting, despite the fact that most palliative care occurs outside acute care settings and is primarily supported by unpaid family caregivers. An overview of the concerns for individuals and families, as well as specific nursing interventions, from all ages would be an excellent support for nursing students and practicing registered nurses

alike. The book structure begins with a description of the goals and objectives of hospice palliative care and the nursing role in providing excellent supportive care. Chapters include research findings and specifically research completed by the authors in the areas of pediatric palliative care, palliative care for those with dementia, and the needs of family caregivers in bereavement. Interventions developed by the editors are provided in this book, such as the "Finding Balance Intervention" for bereaved caregivers; the "Reclaiming Yourself" tool for bereaved spouses of partners with dementia; and The Keeping Hope Possible Toolkit for families of children with life threatening and life limiting illnesses. The development and application of these theory-based interventions are also highlighted. Videos and vignettes written by family caregivers about what was helpful for them, provide a patient-and family-centered approach./div The book will benefit nursing students, educators and practicing registered nurses by providing information, theory, and evidence from research.

Documentation 2007 This full-color handbook is a quick-reference guide to all aspects of documentation for every nursing care situation. It covers current documentation systems and formats, including computerized documentation, and features scores of sample filled-in forms and in-text narrative notes illustrating everything from everyday occurrences to emergency situations. Coverage includes timesaving strategies for admission-to-discharge documentation in acute, outpatient, rehabilitation, long-term, and home care environments and special documentation practices for selected clinical specialties: critical care, emergency, perioperative, maternal-neonatal, and psychiatric. The book includes advice on legal safeguards, dangerous abbreviations, and compliance with HIPAA guidelines and JCAHO requirements.

Advanced Practice Palliative Nursing Constance Dahlin 2016-03-03 *Advanced Practice Palliative Nursing* is the first text

devoted to advanced practice nursing care of the seriously ill and dying. This comprehensive work addresses all aspects of palliative care including physical, psychological, social, and spiritual needs. Chapters include: symptoms common in serious illness, pediatric palliative care, spiritual and existential issues, issues around the role and function of the advanced practice nurse (APN), reimbursement, and nursing leadership on palliative care teams. Each chapter contains case examples and a strong evidence base to support the highest quality of care. The text is written by leaders in the field and includes authors who have pioneered the role of the advanced practice nurse in palliative care. This volume offers advanced practice content and practical resources for clinical practice across all settings of care and encompassing all ages, from pediatrics to geriatrics.

Adult-Gerontology Practice Guidelines, Second Edition Jill C. Cash, MSN, APN, FNP-BC 2019-02-05 Praise for the First Edition: "Because of the way it is organized, this book meets the needs of both novice and experienced advance practice nurses. Each chapter defines the problem, how often it occurs, and what leads to the problem. To aid in assessment, the book includes the physical examination landmarks as well as diagnostic tests that might be needed. A plan of care is offered with several different alternatives for treatment and then notes what type of follow-up is needed. This would be a great resource for anyone working in the field of geriatrics...Score: 92 - 4 Stars! --Doody's Reviews The first book to encompass adult-gerontology practice guidelines for primary care, this comprehensive resource is useful as both a clinical reference and as a text for health care practitioners working with this population. Concise and up-to-date, the book is distinguished by its easy-to-read outline format that enables readers to quickly access the information they need. The second edition features 27 completely new entries associated with the aging population, an entirely new section on geriatric syndromes, and multiple updates to guideline changes for screenings.

Polypharmacy issues are incorporated throughout and the BEERS list of medications is highlighted to guide prescribers in safely tapering or adding medications to a patient's drug regimen. For quick and easy access to information, practice guidelines are organized primarily by body system, disorders are listed alphabetically within each body system, and all disorders are presented in a consistent format. With an emphasis on history taking, the physical exam, and key features of the aging population, each of the more than 240 disorder guidelines include definition, incidence, pathogenesis, predisposing factors, common complaints, other signs and symptoms, subjective data, physical exam, diagnostic tests, differential diagnoses, plan of care, health promotion, follow-up guidelines, and tips for consultation/referral. Particularly helpful features include "Practice Pointers" highlighting crucial information for a disorder and bold-faced "Alerts." Key patient teaching points are presented at the end of each guideline. Also included are 18 procedures commonly used within office or clinic settings and 140 Patient Teaching Guides that are available digitally. New to the Second Edition: 27 completely new entries New section on geriatric syndromes Polypharmacy alerts are incorporated throughout BEERS list of medications is highlighted for each disorder Updated guidelines for various screenings Medicare Coverage and Eligibility Screening U.S. Preventative Services Task Force recommendations on colonoscopy, screening mammogram guidelines, pap smears and pelvic examinations Deprescribing Algorithms ASCCP Algorithms Key Features: Focuses specifically on adult and older adult populations Presented in easy-to-read outline format for quick access to information Delivers consistent presentation of more than 240 disorders by body system Reviews 17 commonly used procedures step by step Provides "Practice Pointers" to indicate important care points Offers digital access to more than 140 extensive Patient Teaching Guides to customize and print
