Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their

individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Family Evaluation Murray Bowen
2009-08-01 The concepts of Murray Bowen, one of the founders of family therapy and the originator of family systems theory, are brought together here in an integrative fashion. Michael Kerr (who worked with Bowen for many years) and Bowen propose that the enormously complex task of evaluating a clinical family can be orderly when it is grounded in family systems theory. Using family diagrams and case studies, the book is devoted to an elegant explication of Bowen theory, which analyzes multigenerational family relationships and conceptualizes the family as an emotional unit or as a network of interlocking relationships, not only among the family members, but also among biological, psychological, and sociological processes. Bowen's persistent inquiry and devotion to family observation, in spite of obstacles and frustrations, have resulted in a theory that has radically changed our ways of looking at all behavior.

Systems Theory and Family Therapy

Raphael J. Becvar 2017-10-20 This book provides an overview of the basic concepts of a systems theoretical perspective using families and family therapy as examples and illustrations of their application in professional practice. In addition, theories of individual and family development are presented with implications for their use in family therapy. The book concludes with more than 100 examples of how the meta-perspective of systems theory can be used in work with families.
