Eastern European Perspectives on Emotional Intelligence Lada Kaliská 2021-02-23

This book offers a unique perspective on Emotional Intelligence (EI) research in Eastern Europe, analyzing current trends in the research and application of EI in a region with a distinct socio-political history. Bringing together leading researchers from seven countries, namely Bulgaria, Croatia, Lithuania, Serbia, Slovakia, Poland, and Russia, chapters within this edited volume present original research that illustrates both the etic and emic aspects of emotions, to discuss how EI research can address psychosocial challenges across different societies. Using a selection of cross-cultural frameworks for comparison, contributors to the volume make important developments to the field of EI research by instating a cultural and regional adaptation of EI theories. This includes considerations of EI from a collectivistic perspective as well as the relevance of creating psychological measurement tools that reflect and represent the cultural and linguistic nuances in the adaptive use of emotional information. Eastern European Perspectives on Emotional Intelligence will prove a valuable resource for academics, researchers, and students of cultural and social psychology, or particularly for those seeking to expand their conceptual understanding of EI.

Key Sociological Thinkers R. Stones 1998-10-01 Despite the fact that most of us think often about society and social life, few of us have had extensive schooling in how to organize or structure such thought. Guided by the belief that the sociological imagination is impoverished if accessible only to a handful of specialists, Key Sociological Thinkers provides the lay reader with a clear and manageable overview of the major sociological developments from Marx to the present day. Key Sociological Thinkers is ideal for students new to the field, veterans looking to brush up, and anyone eager to expand their understanding of the world in which we live.

Ensuring Quality Cancer Care Through the Oncology Workforce Institute of Medicine 2009-04-28 The American Society of Clinical Oncology (ASCO) predicts that by 2020, there will be an 81 percent increase in people living with or surviving cancer, but only a 14 percent increase in the number of practicing oncologists. As a result, there may be too few oncologists to meet the population's need for cancer care. To help address the challenges in overcoming this potential crisis of cancer care, the National Cancer Policy Forum of the Institute of Medicine (IOM) convened the workshop Ensuring Quality Cancer Care through the Oncology Workforce: Sustaining Care in the 21st Century in Washington, DC on October 20 and 21, 2008.

War, Community, and Social Change Dario Spini 2013-08-13 Collective experiences in the former Yugoslavia documents and analyses how social representations and practices are shaped by collective violence in a context of ethnic discourse. What are the effects of violence and what are the effects of collectively experienced victimisation on societal norms, attitudes and collective beliefs? This volume stresses that mass violence has a de- and re-structuring role for manifold psychosocial processes. A combined psychosocial approach draws attention to how most people in the former Yugoslavia had to endure and cope with war and dramatic societal changes and how they resisted and overcame ethnic rivalry, violence and

segregation. It is a departure from the mindset that depict most people in the former Yugoslavia as either blind followers of ethnic war entrepreneurs or as intrinsically motivated for violence by deep-rooted intra-ethnic loyalties and inter-ethnic animosities.

Interpersonal Relationships and Health Christopher Rolfe Agnew 2014 Gathering leading thinkers in social and clinical psychology, public health, medicine, and sociology, Interpersonal Relationships and Health considers theoretical and empirical issues relevant to understanding the social and clinical psychological mechanisms linking close relationship processes with mental and physical health outcomes. The volume arises out of a recent explosion of interest, across multiple academic and research fields, in the ways that interpersonal relationships affect health and well-being. This volume pulls together a range of scholars who focus on different aspects of relationships and health in order to encourage both collaboration and cross-disciplinary initiatives. This is the first edited volume to pull together noted experts across myriad disciplines whose research is at the intersection of human relationships and health. Topics addressed include key biological processes that influence and, in turn, are influenced by close relationships. Interpersonal Relationships and Health presents research that demonstrates the connections between interpersonal relationships, mental and physical health outcomes, and biophysical markers that figure prominently in the fields of psychoneuroimmunology, endocrinology, and cardiology. In addition, it highlights recent work on marital, family, and social relationships and their interplay with health and well-being. Chapters also address sexual health among young and older adults, as well as clinical intervention efforts that focus on the role of relational factors in influencing health. Each chapter highlights extant theoretical and empirical findings and suggests future avenues for research in this burgeoning area.

Relationship Maintenance Brian G. Ogolsky 2019-12-19 Provides an interdisciplinary perspective on behaviors and strategies used to maintain intimate relationships.

General Health Perceptions John E. Ware 1978 The fifth volume in a series reviewing published literature and documenting conceptualization and construction of health status measures used in the Health Insurance Study (HIS). Analyses reported are based on non-HIS sources; plans for analyzing HIS data from the Health Perceptions Questionnaire (HPQ) are documented. The HPQ contains six summated ratings scales reflecting perceptions of current, past, and future health, resistance-susceptibility, sickness orientation, and health worry/concern. These measures appear sufficiently reliable and valid for testing hypotheses on effects of differences in coinsurance and deductibles and fee-for-service compared with group practice and of differences in use of medical care services on health status in general populations.

Coping C. R. Snyder 1999 The award-winning research described in this volume emphasizes the role of people as positive copers. Written by leading experts and including new findings, these provocative essays may well set the agenda for research on stress and coping for the next century.

Ensuring Quality Cancer Care Institute of Medicine and National Research Council 1999-07-21 We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on health services research is included. Ensuring Quality Cancer Care offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.

The Global Seafarer Medzinárodná organizácia práce 2004 This volume offers a systematic account of the effects of globalization on the shipping industry and seafarers' lives. The seafarers' labor market is changing rapidly and this study discusses the challenges encountered in recruitment practices, trade unions, and collective bargaining, as well as training, certification, and fraudulent certification. Wages, contracts, and tours of duty are also investigated, and the book includes in-depth treatment of seafarer safety and hazard exposure. Innovations such as automated engine rooms and the global maritime distress and

safety system, the internationalization of ship registrations, multinational crewing and reductions in crewing levels, and the rise in ship management companies have had a profound effect on seafarers' living and working conditions. This perceptive book examines these and future issues for regulation and enforcement.

Parenthood and Parenting in Croatia: a Developmental and Socio-cultural Perspective Katica Lacković-Grgin 2015 Parental behavior and the experience of parenthood have been areas of study worldwide for the last hundred years (and in Croatia for about forty years). Researchers started with the exploration of parental behavior and parenting styles, but a few decades later the research was broadened to include the experience of parenthood. Previously, when developmental psychology generally meant child psychology, the parenting phenomenon was hardly observed. After developmental psychology became a lifetime phenomenon, parenting was studied in all developmental stages. However, the first phase of parenting is still dominant in research. This fact is reflected in the contents of this monograph, which is a representative of Croatia's most important theoretical and empirical research. The results of some of the research included have had a significant impact on social institutions that deal with issues of family, education and health. Special characteristics in the above mentioned research are: a) Earlier research, which was conducted mainly among mothers, was recently replaced by studies that include joint maternal and paternal influences and their distinct impact on the development of children as well as the effects of parental conflicts on the psychosocial functioning of children. b) Research of parenting and parenthood using a recent theoretical approach to parenting as well as the theory based research designs. c) Critical observations about the shortcomings in published research are presented while future directions of research are proposed.

In addition, the book discusses the roles of motivation in three practical fields: school and college, the workplace, and sports. Topics featured in this text include: Social Relationships and its effects on sexual or intimacy motivation. Conscious and unconscious motivators of behavior. Drives and incentives in the fields of achievement, intimacy, sociability and power. How the biochemistry and structures of our brain shapes motivated behavior. About the Editor: Jutta Heckhausen is the daughter of Heinz Heckhausen, who published "*Motivation and Action*" as a monograph in 1980 and who died in 1988 just before the 2nd edition came out. Dr. Heckhausen received her Ph.D. in 1985 from the University of Strathclyde, Glasgow with a dissertation about early mother-child interaction, and did her Habilitation in 1996 at the Free University of Berlin with a monograph about developmental regulation in adulthood. Dr. Heckhausen worked for many years at the Max Planck Institute for Human Development in Berlin, conducting research about the role of motivation in lifespan development. Responses to Victimization and Belief in a Just World Leo Montada 2013-03-09 The preparation of this volume began with a conference held at Trier University, approximately thirty years after the publication of the first *Belief in a Just World* (BJW) manuscript. The location of the conference was especially appropriate given the continued interest that the Trier faculty and students had for BJW research and theory. As several chapters in this volume document, their research together with the other contributors to this volume have added to the current sophistication and status of the BJW construct. In the 1960s and 1970s Melvin

Lerner, together with his students and colleagues, developed his justice motive theory. The theory of Belief in a Just World (BJW) was part of that effort. BJW theory, meanwhile in its thirties, has become very influential in social and behavioral sciences. As with every widely applied concept and theory there is a natural developmental history that involves transformations, differentiation of facets, and efforts to identify further theoretical relationships. And, of course, that growth process will not end unless the theory ceases to develop. In this volume this growth is reconstructed along Furnham's stage model for the development of scientific concepts. The main part of the book is devoted to current trends in theory and research.

Cultural Perspectives on Women's Depression Dana Crowley Jack 2010-04-28 This international volume offers new perspectives on social and psychological aspects of depression. Burnout, Fatigue, Exhaustion Sighard Neckel 2017-06-19 This interdisciplinary book explores both the connections and the tensions between sociological, psychological, and biological theories of exhaustion. It examines how the prevalence of exhaustion -- both as an individual experience and as a broader socio-cultural phenomenon -- is manifest in the epidemic rise of burnout, depression, and chronic fatigue. It provides innovative analyses of the complex interplay between the processes involved in the production of mental health diagnoses, socio-cultural transformations, and subjective illness experiences. Using many of the existing ideologically charged exhaustion theories as case studies, the authors investigate how individual discomfort and wider social dynamics are interrelated. Covering a broad range of topics, this book will appeal to those working in the fields of psychology, sociology, medicine, psychiatry, literature, and history.

Current Trends in Psychology Wayne Dennis 1947 "During World War II every psychologist had a job to do. His contributions sometimes were made in uniform and sometimes in whatever vestless and cuffless suit was available. Whether in uniform or not, the psychologist's work was related to the war effort or to the essential war functions of the nation. When the war ended, the psychologist found that his responsibilities were no less urgent. For the future his prospects seem to be even heavier burdens and a neverending path. Since the years 1940 and 1941, the psychologist has shown himself capable of performing duties not previously allotted to him, or, for that matter, not previously delegated to anyone else. There has grown up a better understanding of the potential functions of the psychologist, an understanding which creates new assignments for him. Instead of a reluctance to intrust to him problems in human behavior, there is today an insistence that he attempt problems with which perhaps he is not yet prepared to deal. Clearly these past few years have been an era of great change in psychology, as they have in many other fields. It is unfortunate that during these dramatic and eventful times, there were few professional meetings and little time or opportunity for the discussion of professional problems. With the return of the possibility of holding professional meetings, it occurred to us that a symposium on current trends in psychology would be most timely and desirable. With the cordial support of the administrative officials of the University, we were able to hold at the University of Pittsburgh, on March 5 and 6, 1947, a conference on current trends in psychology. The present volume contains the papers delivered then. In planning our program we attempted to include in it discussions of recent advances and of probable future developments in several fields of psychology. There necessarily was a limit to the number of fields which could be included. In each chosen area of psychology we selected a speaker who is now active in that field"--Preface. Perfectionism, Health, and Well-Being Fuschia M. Sirois 2015-09-14 This book brings together the world's leading perfectionism researchers and theorists to present their latest findings and ideas on how and why perfectionism may confer risks or benefits for health and well-being, as well as the contexts which may shape these relationships. In addition to providing an overview of the latest research in this field, this volume explores new conceptual models that may help further our understanding of when, how, and why perfectionism may be implicated in health and well-being. After presenting an overview of the conceptual and measurement issues surrounding the concepts of perfectionism, health, and well-being, three sections address the implications of perfectionism for health and well-being. The first of these sections provides an overview of research and theory on the role of perfectionism in health and illness, health behaviors, and chronic illness. The next section of the book focuses on the cognitive and affective underpinnings of perfectionism as they relate to psychopathology, distress, and well-being, including how it applies to eating disorders, depression, and anxiety. The final section of the book explores specific contexts and how they may contour the associations of perfectionism with health and well-being, such as in the domains of interpersonal relationships, academic pursuits, and work-related settings. Perfectionism and well-being is a topic not just for researchers and scholars, but clinicians and practitioners as well. For this reason, chapters also include a discussion of prevention and treatment issues surrounding perfectionism where relevant. By doing so, this volume is an important resource for not only researchers, but also for those who wish to use it in applied and clinical settings. By presenting the latest theory and research on

perfectionism, health, and well-being with a translational focus, *Perfectionism, Health, and Well-Being* makes a unique and significant contribution to perfectionism as well as general wellness literature, and highlights the need to address the burden of perfectionism for health and well-being. .

Life Events and Illness George William Brown 1989-01-01 The role of factors outside the province of the physical and biological sciences in the onset of illness has long been a source of speculation. While early efforts in psychosomatic medicine focused on the relationship between mental states and illness, the effects of personal status and social circumstances on physical health are only now receiving the attention they merit. By integrating current theory, methodology, and research, this ground-breaking volume advances the study of life events and disease to a new stage. George Brown and Tirril Harris are ideal editors for such an undertaking. George Brown has long been known for his path-breaking work on intensive clinical assessment and designing measures that capture the real complexity of social situations, assigned meanings, and personal response to crisis. He brought to light the importance of 'expressed emotion,' the differential role of life events in schizophrenia and depression, and most recently, produced a seminal work on the social etiology of depression with Tirril Harris. As David Mechanic notes in his Foreword, the defining characteristics of these efforts, which are also reflected in this volume are a 'sensitivity to clinical material and capitalizing on serendipity; self-consciousness about methods and methodological advances; and focus on theory with careful efforts to

specify intervening processes and the links between macro events and personal meanings.' Along with their collaborators, these eminent editors bring together an impressive range of theoretical thought and empirical study organized around the Life Events and Difficulties Schedule (LEDS). Their examination of the origins of life events and difficulties and the notion of 'conveyor belts' to continuing adversity capture the immutable uncertainties of life and help to link concerns with life events and disease to larger issues of human development. The authors' innovative approach to establishing the relationship between 'attitudes' and psychiatric and physical disorders fully utilizes the wealth of data elicited by the LEDS, and demonstrates how the comprehensiveness of this data matches the sophistication and complexity of the theoretical ideas it serves. Addressing fundamental questions on the whether the specific nature of life events and vulnerability factors differ in different disorders, the authors conclude by providing a perspective on psychodynamic etiology which emphasizes the specificity of crucial links. It integrates social, psychological, and biological factors around the notion that specific types of cognitive-affective experience are linked to specific types of illness. While significantly advancing our understanding of how individuals define and deal with adversity, LIFE EVENTS AND ILLNESS also fosters a greater appreciation of the methodological tools available for examining these processes. For all clinicians, researchers, and students in the behavioral sciences, this timely work not only provides a comprehensive review of the literature and a critical examination of current research models but also points the way for future investigations.
